Why are 5G base stations falling?

Net 5G base station (BTS) or 'site' additions have plunged in recent quarters, underlining the steep decline in network-building capital expenditures of both Reliance Jio and Bharti Airtel-India's two-biggest telcos.

Why are 5G base stations reducing in India?

Recent data highlights a significant reduction in quarterly 5G base station additions by Reliance Jio and Bharti Airtel. The decreased rollout of 5G sites is leading to slower revenue growth for tower companies like Indus, as India's top telcos have nearly completed their 5G rollouts and 4G network expansions.

How many 5G base stations are there in China?

Xie Cun, director of the information and communication development department at the ministry, said that Chinese operators have already deployed more than 1.15 million 5G base stations, accounting for more than 70% of the global total, and 5G network coverage has been achieved in urban areas of all prefecture-level cities.

Should 5G be stopped?

In fact The International Society of Doctors for the Environment, its subsidiaries in 27 countries and more than 200 doctors and scientists are all calling for a stop to be put to the rollout of 5G, 'due to concern that 5G radio frequency radiation will have adverse health effects,' Dr. Moskowitz says.

Since you want to cover a large area, you must build many more base stations than the previous 4G. However, the construction of more base stations does not mean that the number of people ...

Today, not all places in China have 5G base stations. In many places, the construction of relevant base stations has not been carried ...
