Do coal mining companies implement emergency preparedness training & assessment simulations?

There is substantial evidence that structured programmes of emergency preparedness training and assessment simulations are being implemented or considered by most major coal mining companies.

Are there different organisational models for mine rescue services?

The mines rescue services have been examined at national level and it has been shown that whilst there is substantial commonality in the services, generic equipment and standards employed, there are various organisational models.

How do mines rescue services communicate?

Traditionally the mines rescue services have had to employ signalling keys linked by cable reels providing only rudimentary communications. Such systems are also heavy and inflexible.

Should electrical equipment be used in mines rescue operations in coal mines?

Firstly, electrical equipment for use in mines rescue operations in coal mines must be intrinsically safe certified. If the apparatus is specifically designed for mines rescue use, then inevitably the total product market size will be small.

The choice of appropriate escape or rescue equipment depends on the results of risk assessment and the emergency response plan. The relevant criteria here are the degree of contamination ...

Studying the emergency rescue ability of coal mine water penetration accident aims to improve the efficiency of emergency rescue operations, find and rescue trapped ...

This report provides an extensive review of the current scientific, technical and organisational knowledge
