OverviewHistory of the bifacial solar cellCurrent bifacial solar cellsBifacial solar cell performance parametersA bifacial solar cell (BSC) is a photovoltaic solar cell that can produce electrical energy from both front and rear side. In contrast, monofacial solar cells produce electrical energy only when photons are incident on their front side. Bifacial solar cells and solar panels (devices that consist of multiple solar cells) can improve the electric energy output and modify the temporal power production profile co...

Traditional solar panels, also called monofacial panels, are designed to absorb sunlight exclusively on their front side. The backside, ...
