Overview Distributed energy resources Operation Services Energy trading Markets See also A virtual power plant (VPP) is a system that integrates multiple, possibly heterogeneous, power resources to provide grid power. A VPP typically sells its output to an electric utility. VPPs allow energy resources that are individually too small to be of interest to a utility to aggregate and market their power. As of 2024, VPPs operated in the United States, Europe, Asia and Australia. One study reported that VPPs during peak demand periods are up to 60% more cost effective t...
