Do generators need to inspect hazardous waste containers weekly?

Small and large quantity generators (SQG,LQG) are required to inspect hazardous waste containers weekly for leaks and deterioration, as noted in 40 CFR 262 - Standards Applicable to Generators of Hazardous Waste. Using a weekly checklist ensures compliance with this requirement and aids in maintaining compliance records.

What is a generator inspection checklist?

An inspection checklist for safe generator operation is key to proper equipment maintenance. Generator inspection checklists, like the one we have in the 1st Reporting app, are challenging to find for adequate generator inspection and maintenance.

Are generator inspections compliant?

One of the best practices to ensure that generator inspections are compliant is to include training information such as the equipment user manuals. Naturally, if you use a printed checklist, like our digital Inspection Checklist for safe generator operation, you may need help to include a user manual.

Do VSQG generators need a weekly inspection?

Weekly inspections are not federally required for very small quantity generators (VSQG), but it is a best practice to perform inspections regularly. States may have more stringent regulations, so be sure to check your state's requirements.

You must conduct inspections often enough to identify problems and make corrections before emergencies occur. Use this checklist as a written or electronic record of your inspections.
