The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation. Electricity consumption is 31.6 GWh, from 14 MW of installed generation capacity, with most load concentrated on the main island of Rarotonga. Per-capita electricity con...

It is a fact that as long as we generate our power with fossil fuels as the dominant source, our power prices will not come down. ...

It is a fact that as long as we generate our power with fossil fuels as the dominant source, our power prices will not come down. It is a fact that Renewable Energy, especially solar ...

The Cook Islands has abundant solar radiation, which makes solar electricity PV an attractive option. On average, about 80 percent of households already use solar water heating, and we ...
