The Czech Republic had almost two gigawatts (GW) of photovoltaic capacity at the end of 2010, but installed less than 10 megawatts (MW) in 2011 due to the feed-in tariff being reduced by 25%, after installing almost 1,500 MW the year before. Installations increased to 109 MW in 2012. In 2014, no new installations were reported.

It features a mix of rolling hills, valleys, and mountain regions, with a climate well-suited to year-round solar generation, especially with proper system design and orientation.
