This article explains how you can simulate a power outage and test your Base battery system once your battery is installed.

Typically, the Base Power system is installed near the electric meter, with 3ft of space allocated on the wall for mounting the automatic transfer switch, followed by a 3ft x 3ft ground footprint ...

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage ...

Confirm that the charging source prior to connecting or disconnecting battery terminals has been disconnected or off line. Determine if battery is inadvertently grounded. If inadvertently ...

Leaving base stations plugged in ensures that our devices are always ready to use, eliminating the need to fumble with cords and waiting for them to charge. This ...

You will likely never need to replace your Base Station's batteries as they are rechargeable and meant to last. The Base Station takes four (4) 1.2V, 1300mAh nickel-metal hydride (NiMH) ...

As the battery charge gradually decreases and the battery voltage drops to 42V, the comparator outputs a low level, the relay opens, disconnecting the battery from the base station equipment.

If the Base Station is unplugged or the power goes out, the backup battery keeps you covered for up to 24 hours. With a monitoring plan, the Base Station will alert the SimpliSafe®; monitoring ...
