What is a pressurised container?

A pressurised container is a versatile, sealed container or vessel that can be used in development laboratories as well as in large production facilities. The pressure inside the container is higher than the ambient pressure, thereby making pressurised processes, such as sterilisation or transfer, safe.

Why should you choose Waldner pressurised containers?

You will be persuaded by the many benefits of Waldner pressurised containers. Their quality is one of their main benefits. They are manufactured from extremely stable, durable and high-quality components and produced with precision workmanship. This creates a product that will perfectly fulfil its purpose over many years to come.

Are pressurised containers safe?

Pressurised containers are governed by strict safety regulations - and rightly so. Working with substances under pressure comes with high potential risks. Safety standards of all kinds ensure that the pressurised containers are safe to use, and that damage to property and personnel is avoided.
