-----  
What is the value of distributed energy resources (VdeR) program?

The "Value of Distributed Energy Resources" (VDER) program, implemented by the New York Independent System Operator (NYISO), is a novel pricing mechanism designed to value and compensate distributed energy resources (DERs), including solar, wind, and energy storage systems.

Does New York have a market for distributed energy resources?

New York has long been an active market for distributed energy resources (DERs) and community-scale clean energy projects.

Can a standalone energy storage system be a CDG project?

standalone energy storage system may be configured as a RM project, requiring that the bills receiving credits are under the same utility account .1 A standalone storage system may also function as a CDG project with diverse offtakers, provided that it follows all CDG guidelines (10+ offtakers, at least 60% to mass market, etc .) .

How is the value stack determined for energy storage projects?

This valuation is determined through the VDER's Value Stack, which is composed of several key components for energy storage projects: Energy Value (LBMP): This component is primarily based on the zonal day-ahead hourly location-based marginal pricing (LBMP) set by NYISO. The LBMP is influenced by several factors:

MUCH definition: great in quantity, measure, or degree. See examples of much used in a sentence.

Much is used as an adjective or adverb, but it always means a large quantity, extent, or degree. When something hurts very much, it's very painful, and when your friend says your gift is very ...

You use much to indicate the great intensity, extent, or degree of something such as an action, feeling, or change. Much is usually used with "so", "too", and "very", and in negative clauses with ...
