-----

To harness its abundant sunlight and wind, South Africa needs renewable energy storage systems to store this clean power. The government must encourage companies to set ...

To unlock the full potential of renewables, South Africa must prioritise investment in energy storage across all levels - utility, commercial, and residential. But that also requires...

Explore how South Africa's Battery Energy Storage IPP Programme is transforming the national grid for sustainability.

Embedded solar PV installations, along with BTM energy storage solutions in the CI& A sectors, are expected to remain attractive investment opportunities in the short to ...

The R850 million investment in battery backup systems is expected to have far-reaching implications for the South African economy. By mitigating the effects of power ...

South Africa urgently needed over 360 megawatts (MW) of additional storage, and testing by the state-owned utility, Eskom, confirmed that grid-scale battery storage technology ...

Working closely with leading global battery and balance-of-plant suppliers, Globeleq estimates that the project will require an investment of approximately US\$300 million and will ...

Storage offers a way to decentralise power, enabling localised microgrids that are more resilient to national grid instability. To unlock the ...

The energy transition presents a unique opportunity for South Africa to not only address its internal
