How will 5G base stations and devices work?

To address the demands of increased performance, 5G base stations and devices will use many antennas. Arrays of up to hundreds of small antennas at the base station will make it possible to focus the transmission of radio waves to maximize the signals that the connected devices receive. This is called beamforming or massive MIMO.

What does 5G sound like?

During my investigation I also managed to capture the sound of 5G which is something else! It has no resemblance to the smooth high pitch sound of 3 /4G transmitters. It's highly erratic and almost sounds like static electricity. Just listening to its erratic sound speaks for itself - listen below!
