Will the London Underground be powered by solar energy?

Transport for London (TfL) has signed a major new deal to power the London Underground using clean solar energy, as part of a long-term plan to decarbonise the capital's transport network and support biodiversity. A new solar facility will be built in Longfield, Essex, by EDF Renewables UK through its subsidiary Longfield Solar Energy Farm Limited.

Could a solar farm power London's Underground network?

Transport for London (TfL) is planning to set up solar farms to help power its Underground network. The transport body has asked for potential "delivery partners" to apply to provide up to 64 megawatts of zero-carbon electricity from purpose-built solar farms.

Could solar farms decarbonise London's iconic transport system?

This is the start of a long-term journey to decarbonise London's iconic transport system.' The purpose-built solar farms could provide up to 64 megawatts of clean energy, which is around 5 percent of the electricity needed to run the London Underground network, it said.

Can London get more solar?

The Mayor's Solar Action Plan sets out how City Hall programmes are expected to more than double London's current solar energy capacity. But the Mayor thinks London can, and should, go further than this and wants to provide support to local government, businesses and others to install more solar in London.
