What are the 5 dimensions of Luxembourg's climate plan?

This plan has 5 dimensions in which Luxembourg can act: research, innovation and competitiveness. In order to achieve the objectives of the Paris Agreement, the national climate objective for Luxembourg is to reduce greenhouse gas emissions by 55% by 2030.

What will Luxembourg do in the future?

Citizens and scientists alike have come out in favour of even more ambitious targets and measures for Luxembourg in the future: the Platform for Climate Action and Energy Transition.

How will the LULUCF sector improve carbon management?

Since forests have a significant natural carbon storage potential, the targets for net greenhouse gas removals in the LULUCF sector will be strengthened. In addition, an aid scheme for the sustainable management of private forests, the Klimabonus Bësch, will be established.

A new report released by the International Energy Agency and the government of Luxembourg provides recommendations on how the country can address challenges hindering its energy ...

By the end of the decade, Luxembourg's energy transition will require private and public investment totalling EUR8.5 billion, the energy and environment ministries said in response to ...

The Integrated National Energy and Climate Plan (NECP) forms the basis of Luxembourg's climate and energy policy and serves as a roadmap that will be put into practice through the ...

Recommendations provided by IEA to help Luxembourg to ease its energy transition include: Aligning infrastructure plans and processes with renewable energy deployment and facilitating ...

Luxembourg's ambitious National Energy and Climate Plan (NECP) places energy storage solutions at the heart of its strategy for decarbonisation and the integration of renewable energy.

The Integrated National Energy and Climate Plan (NECP) forms the basis of Luxembourg's climate and energy policy and serves as a roadmap that ...

The strategy, announced on 9 July, aims to maximise the added value of storage batteries for end consumers and the electricity ...

A first distribution network development plan is currently being prepared based on scenarios without any battery energy storage capacity forecast due to limited and uncertain data

The strategy, announced on 9 July, aims to maximise the added value of storage batteries for end consumers and the electricity system as a whole, by enhancing its flexibility, ...

The aim is to provide comprehensive and structured assistance to owners of residential buildings with low energy performance, in terms of identifying potential for ...

gulation (EU) 2018/19993, forms the basis of Luxembourg's climate and energy policy for 2030. Addressing the following five dimensions, namely decarbonisation, including renewable ...

This strategy outlines the role of storage batteries in the national electricity system, identifies the challenges to be addressed and proposes 20 concrete measures to facilitate the ...
