-----  
Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

Does Telehouse have a data center in Marseille?

TELEHOUSE Marseille Data Center: Connect your business to the Mediterranean and beyond with secure colocation and world-class connectivity. Telehouse, a subsidiary of KDDI, has announced plans for a 50MW data center near Marseille, France, as part of a EUR1 billion investment in expanding its data center footprint in the country.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

How can I see the location of a mapped base station?

The map opens from left side main menu. In the maps tab you can see the location of already mapped base stations. The application will automatically only show the base stations of the current network being used (LTE in the picture). The location of base stations can also be viewed from the Cellmapper webmap.

The base station is marked on the map as a red pin in mobile and a red arrow in a browser. A blue pin refers to your own location and the black line tells you which station you are ...

Backhaul Connection: The backhaul connection links the base station to the core network in the mobile communication system. It ...
