How does 5G work?

5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.

Does Hormuud Telecom have a 5G network?

Hormuud Telecom is optimistic about the future, citing an existing 4G network that serves 70% of the population. The company anticipates an increase in coverage, with 5G services reaching 88% of urban dwellers and approximately 70% of rural communities within a year.

What is the marketing of non-5G services?

The marketing of non-5G services refers to the promotion of enhanced 4G networks that are presented as precursors or equivalents to 5G. Some mobile network operators marketed upgraded 4G technologies using terms that suggested 5G capability.

Will 5G reach 80% of urban dwellers in a year?

The company anticipates an increase in coverage, with 5G services reaching 88% of urban dwellers and approximately 70% of rural communities within a year. The launch of the 5G network promises faster and more reliable internet services, with the company claiming over 80% coverage capability in its initial statement.

The world's highest-altitude 5G base station started operation as early as 2020, with its signal covering the summit of Mount Qomolangma.
