---

Understanding PS chemistry across diverse battery environments is key to advancing M-S batteries. This review aims to provide a comprehensive overview of the PS ...

In this work, inspired by the high solubility and low cost of both polysulfides and permanganates, the S/Mn RFBs with S 42- /S 22- and ...

In this work, inspired by the high solubility and low cost of both polysulfides and permanganates, the S/Mn RFBs with S 42- /S 22- and MnO 4- /MnO 42- as negative and ...

PDF | A new flow battery is presented using the abundant and inexpensive active material pairs permanganate/manganate and ...

Here, we report a stable and cost-effective alkaline-based hybrid polysulfide-air redox flow battery where a dual-membrane-structured flow cell design mitigates the sulfur ...

In this work, inspired by the high solubility and low cost of both polysulfides and permanganates, the S/Mn RFBs with S 42- /S 22- and MnO 4- /MnO 42- as negative and ...

Aqueous manganese-based redox flow batteries (MRFBs) are attracting increasing attention for electrochemical energy storage systems due to their low cost, high safety, and ...

Understanding PS chemistry across diverse battery environments is key to advancing M-S batteries. This review aims to ...

Their work focuses on the flow battery, an electrochemical cell that looks promising for the job--except for one problem: Current flow batteries rely on vanadium, an energy ...

A new flow battery is presented using the abundant and inexpensive active material pairs permanganate/manganate and ...

PDF | A new flow battery is presented using the abundant and inexpensive active material pairs permanganate/manganate and disulfide/tetrasulfide.

A new flow battery is presented using the abundant and inexpensive active material pairs permanganate/manganate and disulfide/tetrasulfide. A wetted material set is identified for ...

To exploit low-cost and high-capacity polysulfide flow batteries with industrial-relevant cycling stability, we develop a charge-reinforced ion-selective membrane to retain...

A wetted material set is identified for compatibility with the strongly oxidizing manganese couple at ambient and elevated temperatures. Both solutions allow high active material solubility, with ...
