What are the benchmarks for PV & energy storage systems?

The benchmarks are bottom-up cost estimates of all major inputs to typical PV and energy storage system configurations and installation practices. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

Are minimum sustainable price benchmarks effective for long-term PV cost analysis?

By muting the impacts of policy distortions and short-term market fluctuations, the new minimum sustainable price (MSP) benchmarks provide an effective basis for long-term PV cost analysis. However, they do not represent dynamic market conditions and should not be used for near-term policy or market analysis.

How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m² and a rated power of 400 watts, corresponding to an efficiency of 21.1%.

How much does a residential PV system cost?

Figure 9. Q1 2022 U.S. benchmark: 7.9-kWdc residential PV system cost (2021 USD/Wdc) This section describes our commercial PV model's structure and parameters in intrinsic units (Section 6.1) as well as its output (Section 6.2).
