---

Electricity produced at or near the point where it is used is called Distributed Generation (DG). Distributed solar energy can be located on rooftops or ground-mounted, and is typically ...

Chapter 4: Customer-Adopted Rooftop Solar and Storage (this chapter) explores the technical and economic potential for rooftop solar in LA, and how much solar and storage might be ...

This article proposes a battery energy storage (BES) planning model for the rooftop photovoltaic (PV) system in an energy building cluster.

Imagine your house secretly moonlighting as a mini power station - that's essentially what distributed solar energy storage systems do. These setups combine solar ...

Connecting a large amount of solar and battery systems together is called a Distributed Power Plant (DPP for short. It's also called a Virtual Power Plant). You can think of ...

A small, innovative project that just came online in Los Angeles County shows the potential of aggregating distributed energy ...

A small, innovative project that just came online in Los Angeles County shows the potential of aggregating distributed energy resources and how they can contribute to a more ...

If you are a rooftop solar owner with a battery (or thinking of connecting a battery), we want to help you. See if your state and utility territory offers a DPP program in the DPPs near you ...

DERs, which are typically installed where the electricity is needed--a home, business, or industrial site--can lower energy costs, reduce pollution, and help communities ...

Enhancing the distribution systems resilience can be achieved through the development of microgrid (MG), which is a localized distribution network that consists of ...

They primarily provide electricity to local consumers in homes and businesses. They include a diverse set of technologies, such as distributed rooftop solar systems, community solar ...
