---

After a massive lithium ion battery storage site exploded into flames in Monterey County -- spewing toxic gases into the air and scattering heavy metals over the ground -- ...

Monterey County authorities issued evacuation orders Thursday night after a fire broke out at a battery storage facility along the Central Coast that the company claims is the ...

Low-carbon energy sources like wind, solar, and batteries don't add to the global problem of climate change. But many of these ...

A fire at the world's largest battery storage plant in California destroyed 300 megawatts of energy storage, forced 1200 area residents to evacuate and released smoke ...

Evacuations were lifted Friday night for people near an ongoing fire that erupted Thursday at one of the world's largest battery ...

A massive fire that destroyed much of a huge battery storage facility in Moss Landing raised questions, and ...

Fires in battery energy storage systems put renewable energy systems at risk. How can they be prevented? A five-day fire in a lithium ...

Low-carbon energy sources like wind, solar, and batteries don't add to the global problem of climate change. But many of these projects are industrial sites, and their effects ...

A massive fire that destroyed much of a huge battery storage facility in Moss Landing raised questions, and possible new hurdles, for California's efforts to shift most of its ...

Following a lithium-ion battery fire at the Moss Landing plant in Monterey County in California, communities nationwide are expressing concerns about hosting similar plants.

A fire at a one of the world's largest battery plants in California contained tens of thousands of lithium batteries that store power from renewable energy sources.

Evacuations were lifted Friday night for people near an ongoing fire that erupted Thursday at one of the world's largest battery storage plants in the northern half of California.

When lithium-ion batteries catch fire, they generate extreme heat and can release toxic gases like carbon dioxide, carbon monoxide, ...

When lithium-ion batteries catch fire, they generate extreme heat and can release toxic gases like carbon dioxide, carbon monoxide, hydrogen, methane, ethane and other ...

A fire at a one of the world's largest battery plants in California contained tens of thousands of lithium batteries that store power from ...

After a massive lithium ion battery storage site exploded into ...
