Solar PV Global Supply Chains - Analysis and key findings. A report by the International Energy Agency.

Today, China's share in all the manufacturing stages of solar panels (such as polysilicon, ingots, wafers, cells and modules) exceeds 80%. This is more than double China's share of global PV ...

In that last year, the global solar PV chain reached an industrial business value of some 104.7 billion U.S. dollars, with China ...

Solar accounted for 69% of all new electricity-generating capacity added to the US grid in Q1 2025. The US added 8.6 GW of solar module manufacturing capacity in Q1, bringing ...

In that last year, the global solar PV chain reached an industrial business value of some 104.7 billion U.S. dollars, with China dominating the market, and followed by the United ...

As such, the robustness of solar PV supply chain is of critical importance, and China's current domination over it is problematic. This report analyzes progress in diversifying ...

NLR conducts detailed supply chain analysis for specific photovoltaic module technologies. These analyses include production locations, supply chain risk and costs, and ...

What components make up the supply chain for solar photovoltaics? The supply chain for solar PV has two branches in the ...

Although thin-film solar panels are produced under just one roof, China's solar industry has focused on the five-step value chain for classic solar ...

At current solar module prices, few independent U.S.-owned module producers will be able to remain in business long-term. Several companies have already cancelled plans to build new ...

Because diversification is one of the key strategies for reducing supply chain risks, the report assesses the opportunities and challenges of developing solar PV supply chains in terms of ...

What components make up the supply chain for solar photovoltaics? The supply chain for solar PV has two branches in the United States: crystalline silicon (c-Si) PV, which ...

Although thin-film solar panels are produced under just one roof, China's solar industry has focused on the five-step value chain for classic solar cells made of crystalline silicon and then ...
