-----

Capacity and fast-reserve auctions in leading countries have transformed storage into a contract-backed asset class, attracting ...

In the face of grid volatility, battery storage is becoming a central pillar of clean energy infrastructure in Southeastern Europe, supported by targeted subsidies and EU resilience ...

The European Union (EU) will not meet its 2030 clean energy targets unless cumulative battery storage deployments rapidly accelerate, ...

SolarPower Europe is a member-led association that aims to ensure that more energy is generated by solar than any other energy source by 2030. Welcome to the European Market ...

The April 2025 blackout across Spain and Portugal wasn't just a power failure--it was a wake-up call. As renewable energy gains dominance, one fact is clearer than ever: ...

The April 2025 blackout across Spain and Portugal wasn't just a power failure--it was a wake-up call. As renewable energy gains ...

BESS projects are critical to the energy mix as they provide security and stability to the European future electricity grid. At the same time, more renewables are a substitute for traditional power ...

Battery Energy Storage Systems (BESS) are key to integrating variable renewable energy sources like solar and wind. This report examines the factors influencing BESS ...

In the face of grid volatility, battery storage is becoming a central pillar of clean energy infrastructure in

Southeastern Europe, supported by ...

To ensure a smoother energy transition, Europe must address curtailment, negative electricity prices, and solar price cannibalization with ...

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing ...

BESS plays a vital role in backup power supply, frequency regulation, peak shaving, and grid support. By understanding the intermittent character of renewables, it improves energy ...

BESS projects are critical to the energy mix as they provide security and stability to the European future electricity grid. At the same time, more ...

The European Union (EU) will not meet its 2030 clean energy targets unless cumulative battery storage deployments rapidly accelerate, SolarPower Europe has said.

Capacity and fast-reserve auctions in leading countries have transformed storage into a contract-backed asset class, attracting infrastructure investors who view batteries as ...

To ensure a smoother energy transition, Europe must address curtailment, negative electricity prices, and solar price cannibalization with an increased deployment of BESS. ...
