-----

In this review, we systematically and comprehensively summarize the fundamental principles and recent progresses of ZHSs. Furthermore, the critical challenges and ...

An electrochemical zinc ion capacitor (ZIC) is a hybrid supercapacitor composed of a porous carbon cathode and a zinc anode. Based on the low-cost features of carbon and zinc ...

Zinc ion hybrid supercapacitors (ZIHSCs) are truly promising as next-generation high-performance energy storage systems because they could offer high energy density like ...

To meet extreme needs, we here developed ZICs working under harsh conditions including ultrafast rates, sub-million cycles, high loadings, and wide temperatures through the ...

As a new generation of Zn-ion storage systems, Zn-ion hybrid supercapacitors (ZHSCs) garner tremendous interests recently from researchers due to the perfect integration ...

Zinc-ion hybrid supercapacitors (ZIHSCs) have the advantages of low standard potential, high theoretical capacity and good safety in aqueous electrolytes. In this review, the ...

Faced with the growing demand for efficient and sustainable energy storage, zinc ion capacitors (ZICs) are gradually emerging due to their low cost, high safety, and ...

Supercapacitors consist of two capacitive electrodes that store and convert energy through electrochemical double-layer capacitive or pseu-docapacitive behavior; therefore, ...

Zinc-ion hybrid supercapacitors (ZHSCs) are attracting significant attention due to their high energies/power densities, safety, and low cost. In this review, recent advances in the...

Zinc-ion microcapacitors (ZIMCs) have emerged as promising candidates by merging battery-type and capacitor-type charge storage mechanisms. Despite their potential, ...
