Can a biomass-based power plant be a reliable electrification option in Tehran?

Tehran is one of the most populous and polluted cities in Iran with a fossil fuel-dependent economy. This paper aims to assess a techno-economic and environmental feasibility of biomass-based power plant in off-grid mode to present optimal planning for reliable electrification to Tehran.

What are the grid connection requirements for a wind power farm?

The grid connection requirements for a wind power farm are multifaceted and critical to ensuring seamless integration with the electrical grid. These requirements encompass technical specifications, regulatory compliance, and operational considerations, all of which are essential for grid stability and reliable energy generation.

Is a hybrid micro-grid a viable alternative to diesel-only power generation?

The cost-effective option of their proposed hybrid system had a NPC of 137,927 \$, COE of 0.345 \$/kWh and also carbon dioxide reduction of approximately 14 tonnes/year compared with diesel-only power generation. Azaza and Wallin, in 2017, assessed the potential of different Swedish cities for applying a hybrid micro-grid system.

What can a wind power generating system controller control?

According to the results of the simulation, the controllers are capable of controlling the wind power generating system's DC voltage, line-to-line voltage, rotor speed, electromagnetic torque, DC output power, AC output power, active and reactive power, and transmission voltage.

Tehran is one of the most populous and polluted cities in Iran with a fossil fuel-dependent economy. This paper aims to assess a techno-economic and environmental ...

Thus, in this paper, a PV/wind source with various backups including battery/grid/diesel generator for an

educational load with 35kW peak in Tehran city are proposed in order to reach the ...

Thus, in this paper, a PV/wind source with various backups including battery/grid/diesel generator for an educational load with 35kW peak in Tehran city are ...

In this paper, a MATLAB/Simulink simulation program is used to construct a thorough simulation of a wind power generation system that includes the control strategy, ...

In this study, the power required to supply electricity to 250 households in the Shahryar region located in Tehran province was analysed using a hybrid system based on wind turbine load ...

Tehran, IRNA - Electricity produced by two more Iranian industrial plants has been connected to the national power grid as part of a plan to boost the electricity generation in the ...

This study investigates the modeling of an off-grid HRES based on the wind turbine/photovoltaic/gas generator for supplying the consumption of a residential complex in ...

In the present study, the renewable energy potential of wind and solar energy resources and their relevant properties are evaluated via using input meteorological data measured for one year ...

This study investigates the modeling of an off-grid HRES ...

This study investigates the modeling of an off-grid HRES based on the wind turbine/photovoltaic/gas generator for supplying the consumption of a residential complex in ...

In this study, a hybrid system is presented for connection to wind power plants consisting of fuel cell and hydrogen production, to provide reliable power and valuable by ...
