What is a temporary mobile substation?

Temporary Mobile Substations Temporary mobile substations are deployed when there is a planned interruption or maintenance of existing substations, or when new construction or power upgrades are underway. These substations prevent service interruptions by taking over the role of the permanent substation for a specific time frame.

What is a mobile substation?

Mobile substations are a perfect solution, whenever utilities and industries need to provide interim grid connections and temporary power supplies. Applications range from power supply during emergency or planned outages, to events, moving loads, and the integration of distributed or renewable generation.

What are the benefits of prefabricated substations?

This way, the prefabricated substations can bring time savings of up to 30% in substation construction. They also reduce the risk exposure significantly thanks to: Reduced duration of site works and less need of skilled labor. Siemens Energy portable power solutions can increase the resiliency of a power grid and help ensure uninterrupted service.

What is a prefabricated substation?

Prefabricated substations with up to 420 kV : Siemens Energy provides a large range of prefabricated substations that are equally suited for either temporary or permanent use in challenging grid expansion- and maintenance programs or as emergency response.
