A power station, also referred to as a power plant and sometimes generating station or generating plant, is an industrial facility for the generation of electric power.

Here's the story of nuclear power in Norway, from its first experiments in the aftermath of World War II to the decommissioning projects and policy debates of today.

The power grid as we know it began with isolated power generation systems across the world starting in the 1870s. The growth and unification of the systems into an interconnected AC ...

The first large RBMK (1,000 MW - high-power channel reactor) started up at Sosnovy Bor near Leningrad in 1973, and in the Arctic northwest a VVER with a rated capacity ...

Here's the story of nuclear power in Norway, from its first experiments in the aftermath of World War II to the decommissioning ...

Originally marketed towards the public as the future of energy for the UK, in 1956 Calder Hall generated 180 megawatts of power, 40 megawatts of ...

It all began at Calder Hall, Cumbria, when the plant's 65MW dual purpose reactors came online in 1956, making it the world's first full-scale commercial nuclear power station.

The lessons learned from Calder Hall led to more successful nuclear power stations able to produce far more electricity. Calder Hall was the first of 10 ...

This became operational in 1956 and was the world's first nuclear power station to export electricity on a
