-----  
What is an uninterruptible power supply system (UPS)?

2.1 An uninterruptible power supply system (UPS) is defined as a device which for a specific period of time supplies continuous power to radio equipment independent of any power failures in the ship's main or emergency source of electric energy. .2 rechargeable accumulator batteries, complying with the requirements of annex 1.

Can a modern UPS system be used in an explosion-protected area?

R. STAHL, with its more than 80 years of experience in explosion protection, is able to transfer the requirements of a modern UPS system into systems, which are suitable for use in explosion-protected areas.

Why are uninterruptible power supplies important?

In times of increasing relevance of decentral power supplies and decreasing reliability of the power supply networks, uninterruptible power supplies (UPS) become more and more important.

What causes a ups to operate in stored energy mode?

[IEC 62040-3:2021] Variation in the AC input power which could cause the UPS to operate in stored energy mode. Converter which has the functions of both a rectifier and an inverter, and which can reverse the flow of power from AC to DC and vice-versa. [IEC 62040-3:2021] 31.

There are four main uninterruptible power supply components of UPS: 1) the UPS Batteries; 2) the rectifier; 3) the inverter; and 4) the static bypass switch. [pdf]

This document provides requirements for uninterruptible power system (UPS) units used as alternative or transitional power sources on ships. It defines ...

These requirements to UPS units, as defined in IEC 62040-3:2011, apply when providing an alternative power supply or transitional power supply to services as defined in SOLAS II-1/42

To guarantee seamless operations, you must carefully assess Uninterruptible Power Supply Requirements. These requirements define the specifications and standards your UPS solution ...

This page explains the precautions to take when using a UPS (Uninterruptible Power Supply) overseas and the international standards ...

The U.S. Department of Energy (DOE) has published (link is external) a Federal Register Final Rule (FR) amending its test procedure pertaining to Uninterruptible Power Supplies ("UPSs").

The UPS should meet the general requirements set out in regulation IV/13 of SOLAS 1974, as amended, and in resolution A.694 (17), as applicable, and should also comply with the ...

As referred to in the section on the Electric Power Unit (EPU section Chapter 8, Electrical Power Unit (EPU)), any electro-hydraulic Multiplexed subsea control system requires a secure, ...

To guarantee seamless operations, you must carefully assess Uninterruptible Power Supply Requirements. These requirements define the ...

STAHL, with its more than 80 years of experience in explosion protection, is able to transfer the requirements of a modern UPS system into systems, which are suitable for use in explosion ...

This page explains the precautions to take when using a UPS (Uninterruptible Power Supply) overseas and the international standards that apply overseas.

The U.S. Department of Energy (DOE) has published (link is external) a Federal Register Final Rule (FR) amending its test procedure pertaining ...

Six, easy-to-navigate sections take you from the basics of critical power protection right through to system design, compliance and three contrasting example scenarios - an industrial setting, a ...

This document provides requirements for uninterruptible power system (UPS) units used as alternative or transitional power sources on ships. It defines UPS units and the different types ...
